Paris, Tennessee

Architect:  
Hastings Architecture Associates  
Nashville, Tennessee

Construction Duration:  
6 months

Contract Amount:  
\$ 1,534,000

**Project Description:**

The 10,500 square foot surgery center and office building is the third building of a developing medical campus. Approximately one half of this project was to serve as the medical office for Dr. Mobley, with a waiting room, exam rooms, laboratory, and physician's outpatient surgery center. The surgery center included full pre-op and post-op stations, two operating rooms and the other required support functions. The emergency power system, equipotential grounding, and medical gas system required close coordination among the trades.

With the successful completion of this complicated project, Wieck Construction, LLC was awarded the construction work for two additional new buildings and the renovation of an existing building on the same campus. One of these buildings included the construction of a sports medicine / physical rehabilitation center for Vanderbilt Sports Medicine.
